Introduction

Results for CLEF 2013 CHiC Evaluation Lab Track

The following pages contain the results and graphs for all the experiments that have been officially submitted to the CLEF 2013 for the Cultural Heritage in CLEF (CHiC) evaluation lab for the CLEF 2013 CHiC Evaluation Lab track.

This document is divided in three main parts:

1. List of submitted experiments
2. Lab overview results and graphs
3. Individual experiment results and graphs

1. List of Submitted Experiments

This section gives a listing of all experiments and their characteristics:

Participant:	name of the participant who submitted the experiment.
Country:	country of the participant.
Experiment ID:	permanent identifier for each experiment.
Task:	track/task to which the experiment belongs.
Lang.:	language of the topics used to create the experiment (ISO identifiers for language).
Fields:	identifies the parts of the topics used to create the experiment (T = title, D = Description, N = Narrative).
Constr.:	identifies how the query has been constructed from topic fields (manual/automatic).
Pool:	specifies if experiment was used for relevance assessment pooling.

2. Lab Overview Results and Graphs

For each track/task graphs and tables are shown in order to compare the experiments.

The graphs and tables contain the following information:

- Best experiments of at most top five participants
 - Interpolated recall vs precision averages plot
 - Average precision comparison to median plot
- All experiments
 - Average precision box plot
 - Average precision Tukey t-test plot
- Best experiments of at most top five participants
 - Document cutoff levels (DCL) vs precision at DCL plot
 - R-Precision comparison to median plot
- All experiments
 - R-Precision box plot
 - R-Precision Tukey t-test plot
- A table with descriptive statistics of performance figures for each topic
 - Min: The minimum of a set of observations
 - 1st Q: The first quartile of a set of observations
 - 2nd Q: The second quartile (median) of a set of observations
 - 3rd Q: The third quartile of a set of observations
 - Max: The maximum of a set of observations
 - Mean: The arithmetic mean of a set of observations
 - Std: The standard deviation of a set of observations
 - IQR: Interquartile range, the difference between the 3rd and 1st quartiles
 - Range: The difference between the maximum and the minimum of a set of observations
 - C.Var: Coefficient of variation, the spread of a set of data as a proportion of its mean
 - Geom.: The geometric mean of a set of observations
 - Harm.: The harmonic mean of a set of observations
 - MAO: The mean of absolute deviation of the values in a set of observations
 - LOT: The lower threshold below which values of a set of observations are considered outliers
 - UOT: The upper threshold below which values of a set of observations are considered outliers
 - MNO: Mean without outliers, the arithmetic mean of a set of observations without outliers
 - SNO: Std without outliers, the standard deviation a set of observations without outliers

3. Individual Experiment Results and Graphs

This section provides the individual results for each official experiment. For each experiment the following tables and graphs are shown:

- Overall statistics and information
- Interpolated recall vs precision averages plot
- Average precision statistics and box plot
- Average precision comparison to median plot
- Document cutoff levels vs precision at DCL plot
- R-Precision statistics and box plot
- R-Precision comparison to median plot

This section provides the individual results for each official experiment. For each experiment the following tables and graphs are shown:

Lab Overview Results and Graphs

CHIC Ad-Hoc Polish Automatic and Manual Task Top 5 Participants – Standard Recall Levels vs Mean Interpolated Precisor

CHIC Ad-Hoc Polish Automatic and Manual Task Top 5 Participants – Comparison to Median Average Precision by Topic (Topics CHIC-2013-PL-001 to CHIC-2013-PL-025)

CHIC Ad-Hoc Polish Automatic and Manual Task Top 5 Participants – Comparison to Median Average Precision by Topic (Topics CHIC-2013-PL-026 to CHIC-2013-PL-050)

CHIC Ad-Hoc Polish Automatic and Manual Task Top 5 Participants – Comparison to Median R-Precision by Topic (Topics CHIC-2013-PL-001 to CHIC-2013-PL-025)

CHIC Ad-Hoc Polish Automatic and Manual Task Top 5 Participants – Comparison to Median R-Precision by Topic (Topics CHIC-2013-PL-026 to CHIC-2013-PL-050)

Monolingual Dutch run that retrieves documents which contain at least one word from the initial topic and/or the full name of one of query's 1000 most related Dutch Wikipedia concepts obtained with a version of Explicit Semantic Analysis adapted to short documents (topics). The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.

Monolingual French run that retrieves documents which contain at least one word from the initial topic and/or the full name of one of query's 1000 most related French Wikipedia concepts obtained with a version of Explicit Semantic Analysis adapted to short documents (topics). The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.

Monolingual Italian run that retrieves documents which contain at least one word from the initial topic and/or the full name of one of query's 1000 most related Italian Wikipedia concepts obtained with a version of Explicit Semantic Analysis adapted to short documents (topics). The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.

Multilingual run that retrieves only documents which contain at least one word from the initial topic. The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.

Multilingual run that retrieves documents which contain at least one word from the initial topic and/or the full name of one of query's 1000 most related Wikipedia concepts obtained with Explicit Semantic Analysis. The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.

Monolingual Spanish run that retrieves documents which contain at least one word from the initial topic and/or the full name of one of query's 1000 most related Spanish Wikipedia concepts obtained with a version of Explicit Semantic Analysis adapted to short documents (topics). The collections are represented using a tf-idf schema. Two rankings are used in decreasing order of priority: (a) boolean ranking - number of distinct words from the initial topic found in the document; (b) cosine similarity between the document and a topic representation formed using statistics of the 200 most related Wikipedia concepts as provided by the semantic enrichment. The final results are obtained by sorting the entire list of results by decreasing boolean score and, to break ties, by decreasing cosine similarities.
